## Gutter Guard Systems

[www.raindropgutterguard.com](http://www.raindropgutterguard.com)

### Choice Polypropylene Material

Proprietary recipe delivers greater damage resilience than metal, vinyl, or common plastic. UV Stabilizers and added strength against hail, heavy debris, snow/ice, and construction ladder abuse. 10 yr. warranty

### Superior Vertical Rib Alignment

Sensible utilization of the entire gutter width. Engineered for maximum water flow ratio while efficiently separating out clogging debris.

### Perfect Aperture Size

Keeps GUTTER clogging debris out while permitting unwanted GUARD clogging micro debris to pass, allowing the gutters to do their job as they were designed to do.

### Built-in Hinge Seams

To match any roof pitch when "Under Roof" install option is used. Will NOT jeopardize roof warranties. (A.R.M.A.)

### Gutters

Easy fit for 5" & 6" new or existing gutters. Adaptable for 4" to 12" custom widths. Universal front mount and screw fastened so it will never dislodge.

### "Flex-Flange"

Bend flange downward for "Drop-In" style... provides unlimited adaptability for Flat Roofs and "Rigid" Sloped roof materials.

### Ultimate Surface Profile

Forward sloping non-stick surface promotes debris movement forward off the gutter. With NO unwanted speed bumps or debris traps. Which all promotes a self cleaning effect.

### Fire Prevention Design

Unlike flat laying or debris trap designs, Raindrop deters burnable debris from building up on top of the guard.

### Reverse "Raindrop" Bar Design

Greater water flow ratios and non-sheeting characteristics than any solid hood cover or micro filter system. Immediately begins separating debris and siphoning water to the gutter.

### Snow & Ice

Recooves faster and reduces ice problems. Add the "Heated System" Upgrade for the ultimate in ice protection.
